What's New In Projectile Motion?

Projectile Motion is an educational application designed to teach you more about motion laws. All you have to do is set the angle, initial speed and mass. Projectile Motion was developed with the help of the Java programming language and can run on multiple platforms. The Laws of Motion are the basic laws of physics and apply to all physical bodies, and also to the motion of projectiles and gases. The first law states that an object at rest will not change its state of motion, the second law states that an object in motion will continue in that motion unless acted on by an external force, the third law states that no external force can cause motion. The fourth law states that the product of mass and acceleration is constant, the fifth law states that the rate of change of velocity is proportional to the force acting on the body. These laws can be combined to get useful mathematical relationships which can be applied in many different situations. For example if you know the acceleration of an object in motion (by using the second law and the product of mass and acceleration is constant, you can use the third law to determine the force acting on the object. Concepts covered: 1. Motion Vector 2. Objects at Rest 3. Objects in Motion 4. Acceleration 5. Constant Force 6. Free Body Diagram 7. Gravity 8. Inertia 9. Intercepting Planes 10. Impulse 11. Kinetic Energy 12. Mass 13. Momentum 14. Newton's Third Law 15. Point of View 16. Projectiles 17. Reaction Forces 18. Rotation 19. Rigid Body Dynamics 20. Torque 21. Vectors 22. Projectile Motion 23. Work 24. Friction 25. Rigid Body Dynamics Projectile Motion is an educational application designed to teach you more about motion laws. All you have to do is set the angle, initial speed and mass.
